

Chintam Sravan Kumar

PERSONAL DETAILS

Current Location TENALI
Date of Birth October 14, 2003
Gender Male

EDUCATION

Graduation

Course B.Tech/B.E. (Computer Science and Engineering with Specialization Data Analytics)
College Vellore Institute of Technology Vellore (VIT), Amravati, Amravati
Year of Passing Graduating in Jul 2025
Score 9.48/10

Schooling

	Class XII	Class X
Board Name	CBSE	CBSE
Medium	English	English
Year of Passing	2021	2019
Score	89%	86%

INTERNSHIPS

Computer Society of India, VIT-AP | August 2021 - June 2022

- As a lead, I worked at V-Code. I and my team members used to help others learn to code. I used to create the questions and solutions for various coding languages like Python, Java, and C++. I and my team used to handel around 5000 students who wanted to learn coding. We used to have a portal, Instagram, and WhatsApp groups where we used to post the daily and weekly questions. This is the work that I and my team (under my guidance) used to do on this project at our university.?

Coding Ninjas | December 2021 - May 2022

- The Coding Ninjas official members used to give us some tasks related to coding and some times related to entrepreneurship. They used to keep weekly quizzes based on coding and marketing and got stipends for good performance.?

PROJECTS

Contactless login System | January 2023 - March 2023

- As now a days viral infections are increasing day by day so I created a contact less login system which can be used for any other contactless typing. This project detects the user hand and identifies the symbol the user is and it converts that symbol to letter or number and enters it into system. This system helps the user to be safe from viral diseases.

Portfolio | January 2023 - February 2023

- I created my own portfolio using HTML, CSS, and a few templates. It is a type of cover letter in which it express myself in detail. It makes user to better understand about me.?
The link is given below for my Portfolio

www.chintamsravankumar.cu.ma

Voice based Assistant | January 2022 - February 2022

- I made a voice-based assistant using Python. This assistant eases the users task by controlling the system using the commands given by the user. It opens the user files, it plays music, it opens YouTube and opens the browser for unknown commands and uses wikipedia as priority website.?

Loan Management System | January 2021 - March 2021

- I made a loan management system with the combination of Python and MySQL. This project asks the user what type of loan he or she wants to take and displays the details of that particular loan. If user wants to take the loan then it asks the details of the customer. If user wants to check payable loan amount after few days, it will show by calculating interest based on the date of loan taken. It updates the user records based on the amount paid. The admin user can see all the details of a customer.

ACHIEVEMENTS

- Received Google Cloud goodies for performing the labs given in Google Cloud facilitator program and in B.Tech/B.E.
